

EMPOWER YOUR TEAM WITH EXPERT TRAINING FROM DETEGO GLOBAL

Detego Learning provides a comprehensive suite of training modules designed to ensure your team maximises its investment in Detego technology. Delivered in person, online, or through our self-paced learning platform, these courses cover the essentials of digital forensics, real-world use cases, and advanced techniques to deliver faster investigative outcomes.

Investigators will gain hands-on expertise in rapidly extracting, analysing, and reporting on data from thousands of digital devices, including computers, phones, smart devices, loose media, and more.

DETEGO LEARNING: STRUCTURE

Solution training:

- Ballistic Imager
- Field Triage
- Media Acquisition
- MD
- Analyse AI+
- Fusion

Digital Forensics training:

- DF Fundamentals
- DF Advanced
- DF Advanced+

• Practical assessments

- **Exam(s)**
- **Certification**

TRAINING MODULES: DIGITAL FORENSICS

DF Fundamentals

Topics Covered:

- Introduction to Digital Investigations, Devices, and Evidence
- The Principles of Digital Forensics
- Digital Forensics and Incident Response (DFIR) Processes
- Where to Find Digital Evidence
- How to Extract Digital Evidence from Devices
e.g. computers, phones, loose media, drones, smart devices, and more
- How to Conduct Digital Forensics Examination and Analysis
- The Legality of Digital Evidence
- Presenting Your Findings

This section provides a comprehensive introduction to the key aspects of digital investigations. Trainees will gain a deeper understanding of the principles involved in identifying, collecting, examining, and analysing data from digital devices. A strong focus is placed on preserving the integrity of information and maintaining a strict chain of custody throughout the process.

Additionally, participants will explore:

- The types of devices and the data that can be extracted from them
- How to organise and present findings in a court-ready format to support legal proceedings

DF Advanced

Topics Covered:

- Understanding Digital Forensic Reports
- Overcoming Challenges in Digital Forensics

Building on the foundation of DF Fundamentals, this module dives deeper into the analysis of digital forensic reports. It also explores the common challenges faced by digital forensic investigators, offering practical insights, detailed examples, and proven strategies for overcoming them.

To reinforce learning, trainees will complete a simulated investigation at the end of the module, demonstrating their understanding of the software and the concepts covered.

DF Advanced+

Topics Covered:

- Building and Developing Digital Forensics Capabilities
- How to Testify in Court

The DF Advanced+ Programme goes beyond the content of DF Fundamentals and DF Advanced, offering specialised insights into building and enhancing digital forensic capabilities within teams. This module also provides detailed guidance on presenting evidence effectively and confidently testifying in court.

To solidify their learning, trainees will complete a simulated investigation at the end of the programme, demonstrating their mastery of the software and the advanced concepts covered.

TRAINING MODULES: DETEGO SOLUTIONS

Ballistic Imager

Learn how to maximise the potential of Ballistic Imager, Detego Global's internationally patented imaging tool. Recognised as the world's fastest physical imager, it splits the imaging process into multiple collectors, delivering speeds more than 8x faster than the industry average. This allows investigators to forensically secure 1TB of data in under 5 minutes.

This module will:

- Cover the fundamentals and practical applications of Ballistic Imager
- Provide detailed insights on setting up the Ballistic collector and additional collectors
- Include two practice runs focusing on extractions in live and boot environments
- Equip you with the knowledge needed to complete extractions and rebuild split images within Detego Analyse AI+

Field Triage

Make the most of Detego Field Triage, a highly portable tool designed to rapidly identify investigation-related files and provide instant alerts without the need for extensive data extractions or complex analytical processes.

This module will:

- Cover how to configure and tailor search terms and hash values for different investigation types
- Enable you to load the solution onto removable media and deploy it on suspect devices
- Provide guidance on performing highly focused extractions to isolate only the necessary data types
- Equip you to extract files by hash value or keyword and utilise the patented red-amber-green visual alert system to instantly identify target files
- Help accelerate evidence discovery with the all-new Xpress HashScan mode, offering speeds that are 6x faster for pictures and video files, and 3x faster for all file types
- Train you to capture RAM images effectively

Media Acquisition

Tap into the power of Media Acquisition to rapidly and simultaneously acquire data from removable media devices, including USB flash drives, memory cards, all types of Hard Disk Drives (HDDs), and more.

This module will:

- Provide a deeper understanding of the data acquired and demonstrate how to filter data using hash values, keywords, file sizes/types, and date ranges
- Show you how to quickly focus your investigation on the data that matters most, uncovering actionable and admissible evidence
- Teach you how to effectively manage keywords and hash libraries by creating and managing tags, categories, and storage volumes
- Equip you to export and import cases seamlessly to other Detego systems, ensuring smooth collaboration across investigations

Detego MD

Unlock the full potential of Detego MD, a powerful solution that enables investigators to extract and decrypt data from thousands of mobile devices and apps, delivering critical insights for your investigations.

This module will:

- Enable you to unlock and forensically secure data from tens of thousands of phone models, including burner and feature phones, as well as over 2,000 apps
- Teach you how to extract valuable data from IoT devices, smart TVs, Sat Navs, drones, and more
- Provide guidance on performing backup file decryption and keychain extraction for iOS devices
- Equip you with the skills needed to unlock and access data from the latest Android devices
- Show you how to carry out physical and logical data extractions on Android, iOS, Windows OS, Tizen OS, and other mobile operating systems
- Enable you to analyse and report on the captured data using Detego Analyse AI+

Detego Analyse AI+

Learn how to harness the power of Detego Analyse AI+, a cutting-edge solution that delivers advanced analytics and streamlined workflows to uncover critical insights from data collected using Detego Global's tools and other third-party solutions.

With Detego Analyse AI+, you can automatically identify and categorise digital artefacts, detect links between entities and events, and generate detailed investigative reports.

This session will enable you to:

- Apply powerful but simple-to-use analytics to the files and data that have been acquired
- Analyse RAM, search and filter by keywords or hash values
- Leverage AI-powered face recognition to identify persons of interest within large volumes of photos and video files
- Instantly detect AI-generated pictures and videos by conducting swift metadata analysis
- Build and manage custom face watchlists with images of victims, suspects, and witnesses
- Use semantic search on face watchlists to identify persons in specific locations, performing certain actions, holding objects, or displaying particular emotions
- Utilise AI-powered semantic search to minimise manual data sifting and rapidly identify broader concepts and contexts such as "distressed children", "men wearing masks holding weapons", "screenshots of customer account details", etc.
- Harness powerful image search capabilities to match specific locations, signs, movements, objects, patterns, and designs using reference images or the "show similar" feature
- Use AI-powered transcription to unearth evidence from audio and video files in minutes
- Use Analyse AI+ to translate and transcribe audio and video content in 50+ languages to English in seconds
- Scrape JPEGs for valuable EXIF + GEO metadata; display the results on linked mapping
- Use AI-powered detection tools to identify people, weapons, drugs, nudity, indecent images, electronics, and more
- Leverage skin tone and face detection technology
- Carry out video frame caching
- Use Optical Character Recognition (OCR) to extract text from images and video evidence
- Use offline language translation to convert indexed text from over 100 languages to English and carry out cross-language translations
- Decrypt passwords from over 300 file types
- Redact sensitive data across a range of document types including PDFs, DOCX, PPTX, JPG, other popular picture formats, and more
- Easily uncover hidden files using advanced file steganography detection
- Leverage the all-new Artefact_Compare feature to analyse pre and post-deployment device snapshots, identify changes, and ensure device security

Detego Fusion

Gain deeper insights into the capabilities of Detego Fusion, a cutting-edge link analysis tool that enables investigators to rapidly uncover and understand hidden connections.

This module will:

- Show you how to uncover valuable connections between places, people, cases, and devices
- Provide a detailed understanding of relationships to drive investigations forward
- Equip you to use these findings to produce court-ready reports in just a few clicks

DETEGO CERTIFIED FORENSIC EXAMINER - TRAINING OPTIONS

Classroom Session (in person)

- Detego and DF Fundamentals - 3 days
- Detego and DF Advanced - 4 days
- Detego + Mobile Devices and DF Advanced+ - 5 days

Virtual Classroom (with dedicated trainer)

- Detego and DF Fundamentals - 3 days
- Detego and DF Advanced - 4 days
- Detego + Mobile Devices and DF Advanced+ - 5 days

Online (self-paced)

- Detego and DF Fundamentals - 3 days
- Detego and DF Advanced - 4 days
- Detego + Mobile Devices and DF Advanced+ - 5 days
