

DISCOVER DETEGO: AWARD-WINNING DIGITAL FORENSICS SOFTWARE THAT ENABLES INVESTIGATORS OF ANY EXPERIENCE LEVEL TO RAPIDLY EXTRACT, ANALYSE, AND REPORT ON CRITICAL EVIDENCE FROM THOUSANDS OF DEVICES AND APPS.

Our easy-to-use, modular solutions enable frontline and lab-based investigators to exploit data from computers, servers, mobile phones, drones, USBs, HDDs, SSDs, other loose media, smart devices, and thousands of apps.

Our solutions are trusted by USSOCOM, FVEY Special Operations, UK MOD, UK Border Forces, The National Crime Agency (UK), and numerous European Special Operations teams, as well as intelligence agencies, governments, and law enforcement units.

Detego is used globally for:

- Police investigations
- Internet Crimes Against Children (ICAC) and other child abuse investigations
- The Management of Sexual and Violent Offenders (MOSOVO)
- Discreet government operations and intelligence-gathering missions
- DOD / Military DOMEX, CELLEX, MEDEX, and SSE
- Investigative case management, evidence management, and workflow management

Detego is the global leader in rapid data acquisition, triage, workflow automation, and AI-powered automated analysis.

RAPID DIGITAL FORENSICS TOOLS THAT DELIVER ACCURATE RESULTS IN ANY SETTING

Ballistic Imager *(Finalist - Best Computer Forensics Solution - SC Awards - USA)*

The world's fastest forensic imaging tool with patented technology that enables you to rapidly secure data from computers, laptops, and servers up to 8x faster than the industry average.

Field Triage *(Winner - Security and Policing Innovation Award in Digital Forensics - UK)*

A portable tool with cutting-edge technology that's perfect for investigating data on computers, laptops, servers, and loose media. It empowers frontline teams by identifying and alerting them about investigation-critical data through a patented red-amber-green visual alert system.

Media Acquisition *(Finalist - Best Computer Forensics Solution - SC Awards - USA)*

An intuitive tool that enables the simultaneous acquisition and analysis of data from multiple devices. Use Media Acquisition to acquire, analyse, and act on critical data from removable media, mobile devices, computers, and hard drives, and make on-the-spot decisions by accessing live previews of the data being captured.

Detego MD

Forensically secure and analyse data from tens of thousands of phone models (including branded and non-brand mobiles, smartphones, burner phones, and feature phones), over 2,000 apps, JTAG boards, SIM cards, drones, and smart, IoT-enabled devices.

COVERT AND OVERT INVESTIGATION TOOLS FOR THE LAB AND FIELD

Detego Covert

This powerful tool retrieves information from computers without leaving a trace that it was ever run. For truly covert operations, there is even an option to bring up a fake travel webpage while the extraction takes place. This allows undercover data collection right in front of third parties, with no indication that Detego is running behind the scenes.

Detego Analyse AI+ *(Finalist - Security and Policing Innovation Award - UK)*

Analyse AI+ is the central hub for the secure storage and analysis of digital evidence. It integrates all forensic acquisitions and leverages powerful AI analytics and automation to provide in-depth analysis, intelligence, and court-ready reports. This solution comes with fully automated analytical workflows, AI face recognition, semantic search, AI-powered object detection, AI transcription and translation, Optical Character Recognition (OCR), photo DNA matching, password decryption (on more than 300 file types), MD5 and SHA1 hash matching, and more.

Fusion

Leverage AI-powered link-building capabilities with this dynamic tool to uncover connections between people, places, devices, and cases.

Detego Boot

This tool provides a semi-automated boot environment to help both experienced investigators and non-technical frontline users forensically secure data from devices, bypass passwords, and remain covert during extractions.
