CASE MANAGER
FOR DFIR

DETEGO CASE MANAGER FOR DFIR

Take complete control of evidence, workflows, investigations, and compliance.

In today's digital forensics environment, investigators face the challenge of managing overwhelming volumes of evidence, fragmented tools, and increasing caseloads, all while under pressure to deliver court-ready results faster than ever. Traditional case management systems were never designed for the complexity and pace of modern DFIR operations.

Detego Case Manager is built specifically for DFIR teams, developed in direct collaboration with investigators who experience these challenges daily. Unlike generic tools adapted for forensic use, our platform integrates every aspect of the investigative lifecycle into one secure, purpose-built environment, streamlining workflows and boosting efficiency from the get-go.

Tamper-Proof Investigation Management

Keep all incidents, cases, evidence, and investigative data in one secure, centralised platform, hosted on-premise or in the cloud.

Detego Case Manager ensures instant access to critical information, full compliance, and a tamper-proof chain of custody. Investigators can capture real-time, time-stamped notes linked to cases, evidence, and users, ensuring transparency and legal defensibility at every stage of an investigation.

Built-In Workflows That Drive Consistent Outcomes

Detego Case Manager includes pre-built workflows, developed by expert DFIR professionals, to standardise investigations, eliminate bottlenecks, and ensure compliance from day one. These workflows cover critical aspects of investigations, from logging evidence to managing chain of custody and preparing reports. Authorised users can also customise existing workflows or add new ones to meet evolving needs.

Powerful Data Collection, Centralised Management, and Seamless Data Integration

Streamline data collection with highly customisable, ISO-compliant forms using an intuitive form builder that gives users complete control over data fields. All case and investigation-critical data is stored centrally and securely within the platform, ensuring information is always protected and accessible.

Users can also import case logs, evidential data, and reports from other tools, ensuring investigation continuity. Data can be exported easily from Detego Case Manager, supporting smooth workflows and reporting requirements.

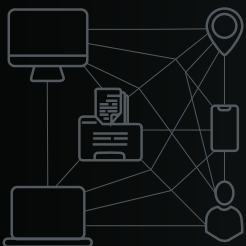

Streamlined Case Handling

The platform delivers complete process control through fully customisable workflows, automation rules, and Kanban-style task management. Assign roles, define escalation paths, and streamline task ownership to ensure investigations progress efficiently.

With task-level insights and granular controls, teams can optimise workflows and improve collaboration. An intuitive dashboard provides role-based access and allows authorised users to prioritise, assign, and track tasks from a single, centralised location.

Entity Management That Connects the Dots

With its adaptive entity management capabilities, Detego Case Manager connects data points such as devices, people, locations, exhibits, and cases. Its flexible Entity Attribute Value (EAV) structure allows teams to map complex relationships, trace patterns across cases, and transform disconnected or hidden data into actionable intelligence.

Deep Insights for Informed Decision-Making

Detego Case Manager provides a powerful dashboard that helps teams make data-driven decisions. Real-time insights into user performance, case status, and investigation progress support better resource allocation and faster resolution times.

With detailed audit logs and time-stamped records, teams can track crucial metrics like task completion times and case durations, helping to identify bottlenecks and improve efficiency.

Customisable reports allow you to drill down into specific time frames, assess productivity trends, and evaluate the financial and reputational impact of investigations.

Effortless Deployment and Immediate Impact

Detego Case Manager can be deployed with ease. Tailored training programmes, available on-site or virtually, equip users with the skills they need from day one. Comprehensive user guides and step-by-step videos offer ongoing support, ensuring smooth integration into existing workflows and helping teams maximise efficiency throughout their investigations.

Detego Case Manager also offers flexible add-ons, including custom workflow development, the integration of investigation-critical databases, and other tailored solutions. Our team will work closely with you to ensure the platform meets your unique requirements.
